

Bitmanagement Software GmbH

Press-release, October 06, 2003

Bitmanagement joins Virtual Dimension Center, Fellbach - and participates with own booth on German fair Cat.Pro, Stuttgart

In September 2003 Bitmanagement Software GmbH joins the Virtual Dimension Center in Fellbach (www.vdc-fellbach.de). Major task of VDC-Fellbach is to act as a platform for companies interested in virtual reality ("VR") on the one hand side and for suppliers of VR-technology of the Stuttgart area in order to present their technical abilities and services on the other side.

By joining the VDC Bitmanagement stresses its focus to act as supplier of "interactive 3D technology" in the German market.

The VDC-Fellbach has arranged a so called "VR Park" on Cat.Pro in Stuttgart, a major fair in CAD graphics in Germany. Different members of VDC are presenting the technical solutions.

Bitmanagement for the first time participates on Cat.Pro with an own booth. We present solutions for visualisation of 3D models in the internet. With our partner blaxxun technologies GmbH we are showing a low-priced software for communication, that enables collaborative working on 3D models at different workstations of a working process (e.g. supplier, producer, customer).

A one page description describes the solutions presented: [Cat.Pro 2003](#)
You may find this description also on our website at "Press / Document".
